flying tent® - a highly versatile and portable hammock sleep-system

As advanced revolution of a traditional hammock the flying tent® combines four applications in one product: hammock tent, bivy tent, hammock and rain poncho.

The new top-of-the range camping utility is the ideal solution every outdoor adventurer is looking for. As winner of the ISPO BRANDNEW AWARD 2017 in the category "Hardware Summer" flying tent® is known as best summer product 2017.

This year flying tent® is presented at OutDoor fair Friedrichshafen.

The multifunctional companion for outdoors

What really sets flying tent® apart is its capability to all outdoor terrain.

flying tent® can be used as a tent hammock between two trees, as well as a single-person tent on the ground. Therefore, the smart gear allows camper, backpacker or biker to sleep in places, where it is undesirable to pitch a traditional tent, including wet ground, river beds and steep terrain.

If rain or wind threatens, zip up the rainfly and you will be nicely protected.

For unlimited sky view, open or remove the rainfly. The integrated fine mesh mosquito net keeps out smallest insects to sleep comfortably under the stars.

By removing the upper section using the zipper on the side, flying tent® can instantly be transformed into a traditional hammock. The optional use of the hammock as a rain poncho keeps you dry in rainy conditions.

Quality comes first

flying tent® is characterized by a high degree of functionality, innovation and user-orientation. For product designer Jim quality comes first: „flying tent® uses top of the line materials and components and is produced in a highly experienced factory.“

The rainfly is made with premium level ripstop nylon. The tight fabric with silicone finish dries quickly, is fire-retardant and makes the flying tent® waterproof, offering a hydrostatic head rate of 5000mm. The bottom is made of tear-resistant PU coated nylon with 5000mm hydrostatic head that keeps water out.

The smart ventilation system minimizes mugginess and condensation. This means outdoor adventurers keep comfortable in any conditions.

The high quality YKK zippers provide enough strength and are made to withstand the demand of its use. The integrated poles are lightweight, yet durable

Smart and user-oriented product design

Due to the light materials and valuable workmanship the flying tent® weighs only 2450 g inclusive all supplies. The technically innovative and patented functional design is based on the simplistic functions of throw tents and allows an easy and quick setup.

The extended size of 270x110x55 cm offers a spacious sleeping shelter, even for big guys.

When it's time to move and explore further, the flying tent® packs up within minutes.

In short: when adventure calls, grab your flying tent® and **remain independent.**
